Atmos Energy Deploys Aerial Natural Gas Leak Surveys

Atmos Energy will conduct routine maintenance monitoring in the form of aerial leak surveying. This will be done by using a helicopter that will fly 350-500ft above the ground from 9:00 a.m. to 5:00 p.m. from June 7 -9th. It will move at 70 miles per hour, and travel overhead in a lawnmower pattern, back and forth. Atmos says that, "this innovative technology is a valuable resource in leak detection."

Other cities that are a part of this survey route include Red Oak, Lancaster, DeSoto, Ferris, Wilmer, and surrounding areas.

Below is a press release directly from Atmos with more information.

***The above notice reflects the updated dates. The original dates were set to be from June 6-8, but were changed by Atmos due to recent weather.***
